

Securing your Systems

Bryce Plitt, Projetechno

“The log4j vulnerability is the most serious vulnerability I have seen in my decades-long career,” Jen Easterly, U.S. Cybersecurity and Infrastructure Security Agency director

“Switching a single lock for a new one is easy but finding all the millions of buildings that have that defective lock would take time and an immense amount of work.”

Security & Maximo as a Service (MaaS)

Included with your MaaS Subscription:

- Change & Patch Management
- Certified & Auditable ISO 27001/27017/9001 systems
- Penetration Testing
- Vulnerability Management
- Customer Monitoring & Access
- Next-gen firewalls with intrusion prevention systems (IPS) and DDoS protection.
- All customer data access is logged and monitored.
- All customer data is encrypted in-transit and at-rest.
- 3-2-1 backup methodology
- Backups include a multi-layer strategy covering the entire solution stack.
- Customer data is backed up hourly for a maximum RPO of 2 hours and replicated to an alternate data center for disaster recovery requirements.
- ... and so much more
